

NEW YEAR PROMOTION

Diet, Diabetes & other Diseases

Did you know that **overweight** pets are likely to suffer from one or more of the following:

- **Diabetes** - linked to obesity in humans it is also known to occur in a high percentage of fat pets
- **Cystitis and other Urinary problems** - overweight male cats are particularly prone to recurrent painful problems with the bladder and urine
- **Arthritis & Joint Problems** – obesity makes these painful conditions ever harder to bear
- **Skin problems & Fatty Tumours** – risks are greatly increased in overweight animals
- **Heart Disease** – your pet's heart has to work much harder if he is overweight
- **Shorter Life Expectancy** – slim pets live an average two years longer than those that are overweight.

Prolong your pet's life expectancy and let us help you give them a happy, long life.

Start a healthy lifestyle for your pet with our offer:

- Accurate weight and complete body condition assessment
- Appropriate Target Weight - advising how to achieve it for your pet's breed, age and lifestyle
- Dietary Advice – what to feed to help your pet lose weight; how to encourage them to eat it
- Urine testing – measuring Glucose and quality of urine to see if they are likely to be diabetic or have urine problems like cystitis

All this for only £10.00.

- Should the urine test show anything abnormal we can look for crystal formation (which leads to bladder stones or blockage) in the urine under our in-house microscope for just an **additional £15.00.**

Both these tests are usually available to report to you later on the same day that you visit.

Please ensure you leave a telephone number for us to contact you.

- If we suspect **Diabetes** we'll discuss with you what further tests are needed to confirm this.
- If your pet is suffering from **Arthritis** or **Joint Problems** we can advise about appropriate medication, supplements or acupuncture to control pain and inflammation.
- If we suspect **any other conditions** we can discuss all the options with you and help you decide the best way to keep your pet happy.

We will then continue to see your pet regularly until:

- target weight has been reached
- urine is normal
- medication is working to give a pain-free life
- your pet has the best quality of life that age and condition(s) allow

Take advantage of our reduced prices -
